MURAD SHAH

COMPUTER SCIENCE AND FINANCE

Aspiring Fin-Tech (Financial Technology) Developer

M_shah15@u.pacific.edu

SKILLS

TECHNICAL

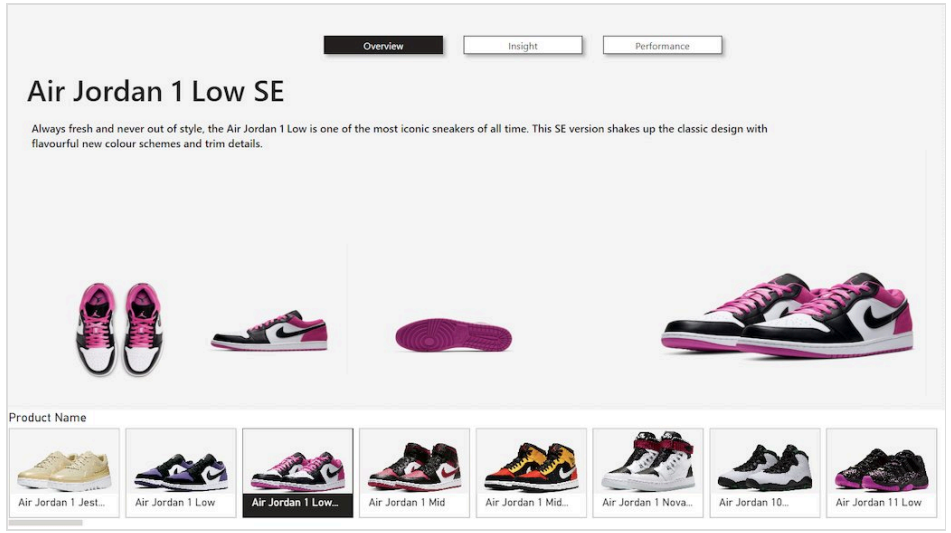

- **Web Development:** HTML, CSS, JavaScript, responsive design
- **Cloud and Hosting:** AWS S3, IAM policies, encryption, SSL/TLS, GitHub Pages, DNS
- **Data Visualization:** Power BI, dashboard creation, data modeling
- **Financial:** sales data analysis and normalization, data integration, revenue forecasting, trend analysis, financial metrics reporting

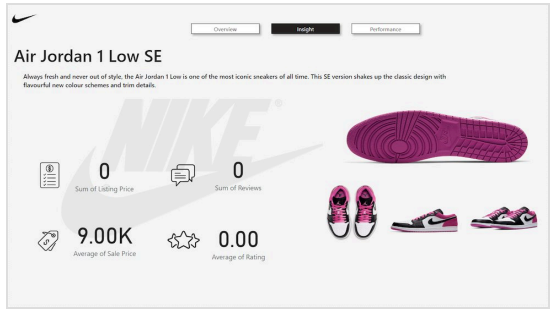

LANGUAGES

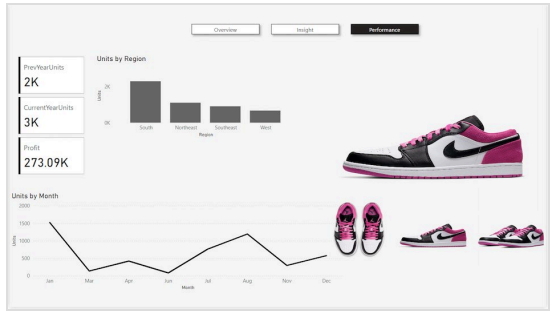

- **Programming:** C++, Java, Python, SQL, HTML, JavaScript
- **Spoken:** English, Pashto, Hindko, Punjabi, Hindi, Urdu

PERSONAL

- Event planning and execution
- Community engagement and outreach
- Public speaking and advocacy organizing
- Campaign management
- Budget planning and resource allocation
- Networking and partnership development
- Policy analysis and recommendations
- Crisis management and emergency planning

NIKE SALES DASHBOARD

A three-page Power BI dashboard tracking product performance and monthly sales, built on simulated Nike sales data.

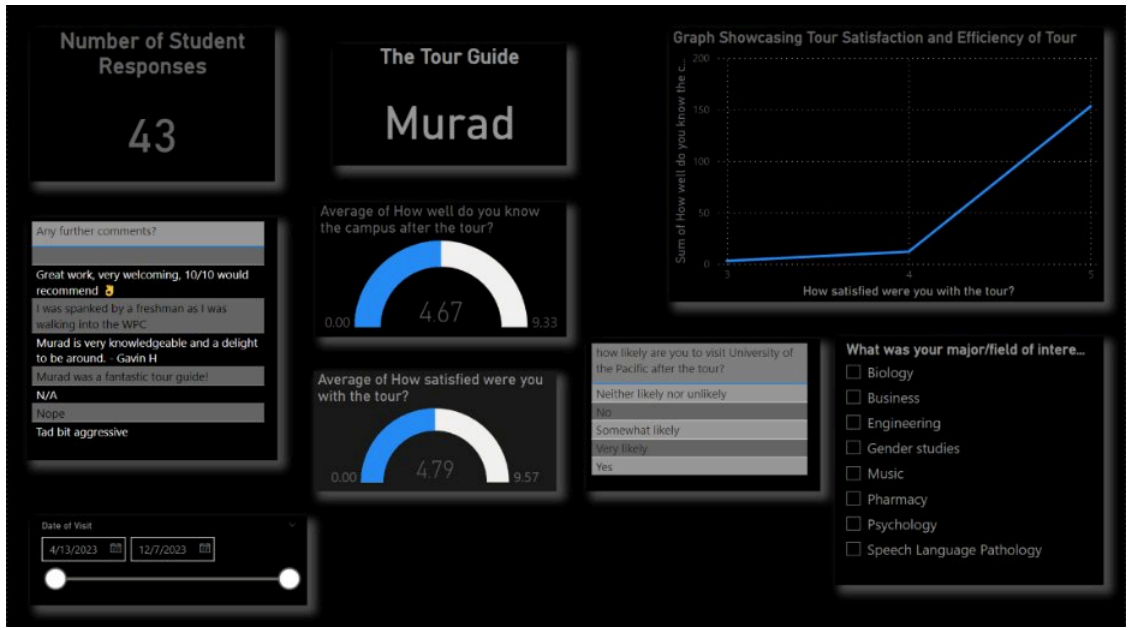

WHAT I DID

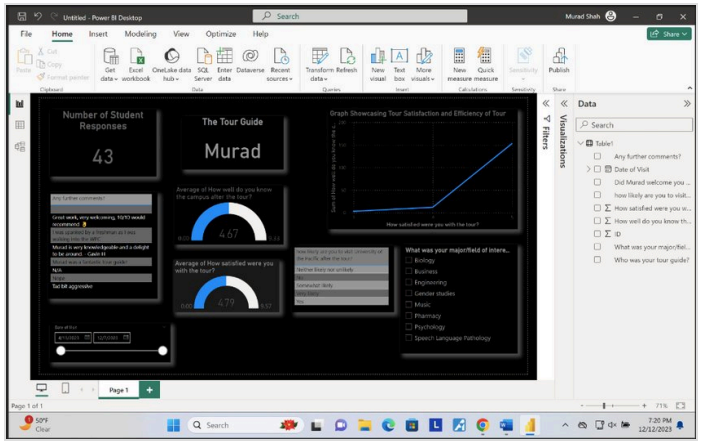

- Combined sales, profit and product data and linked the tables with Power BI data modeling
- Added slicers for product type and timeframe so every visual updates on the fly
- Performance page with units sold, total profit, a regional column chart and a monthly trend line
- Insight page on the Air Jordan 1 Low SE: pricing, ratings and average selling price
- Overview page with a product gallery for comparing models side by side

WHAT I LEARNED

- How to make a dashboard look good without losing clarity in the numbers

POWER BI / DATA MODELING / SALES ANALYTICS

CAMPUS TOUR FEEDBACK DASHBOARD

Analyzing survey feedback from prospective students who joined my University of the Pacific campus tours.

WHAT I DID

- Wrote an 8 to 10 question Microsoft Forms survey on tour quality and impact
- Collected 43 responses on satisfaction, campus familiarity and how likely students were to choose UOP
- Charted satisfaction ratings, comments, and how satisfaction relates to campus knowledge
- Added filters for visit date and intended major

WHAT I LEARNED

- Taking real data from collection all the way to a finished report
- Using the results to improve my own tours

POWER BI / MICROSOFT FORMS / SURVEY DESIGN

```cpp
#include "classCheckings.h"
#include "classSavings.h"
#include <algorithm>
#include <iostream>
#include <vector>

class BankAccount {
public:
  void bankAccMenu();
  void setBnkAccNum(pair<string, int> accNum) {
    this->accNum->first = accNum.first;
    this->accNum->second = accNum.second;
  }
  pair<string, int> getBnkAccNum() { return *accNum; }
  void printInfo();
  void openSavAcc();
  void openChkAcc();
  void modSubAcc();
  void closeSubAccount();
  void briefBnkAccInfo();
  void detailSubBnkAccInfo();
  void setFirstName(string firstName) { this->firstName =
firstName; }
  void setLastName(string lastName) { this->lastName = lastName;
}
  void setSSN(string SSN) { this->SSN = SSN; }
  string getFirstName() { return firstName; }
```

```cpp
#include "bankOperations.h"
#include "bankAccount.h"
#include <iostream>
#include <algorithm>

int BankOperations::numOfBnkAcc = 0;

void BankOperations::openBankAcct() {
    string firstName, lastName, SSN;
    BankAccount *bankAcct = new BankAccount();

    cout << "\n\tEnter the first name of the account holder: ";
    cin >> firstName;
    bankAcct->setFirstName(firstName);

    cout << "\tEnter the last name of the account holder: ";
    cin >> lastName;
    bankAcct->setLastName(lastName);

    cout << "\tEnter the SSN of the account holder: ";
    cin >> SSN;
    bankAcct->setSSN(SSN);

    bankAcct->setBnkAccNum(make_pair("BNK", 10000 + numOfBnkAcc));

    numOfBnkAcc++;
    bankAccts.push_back(bankAcct);
```

BANK MANAGEMENT SYSTEM

A menu-driven C++ program for opening, managing and closing savings and checking accounts.

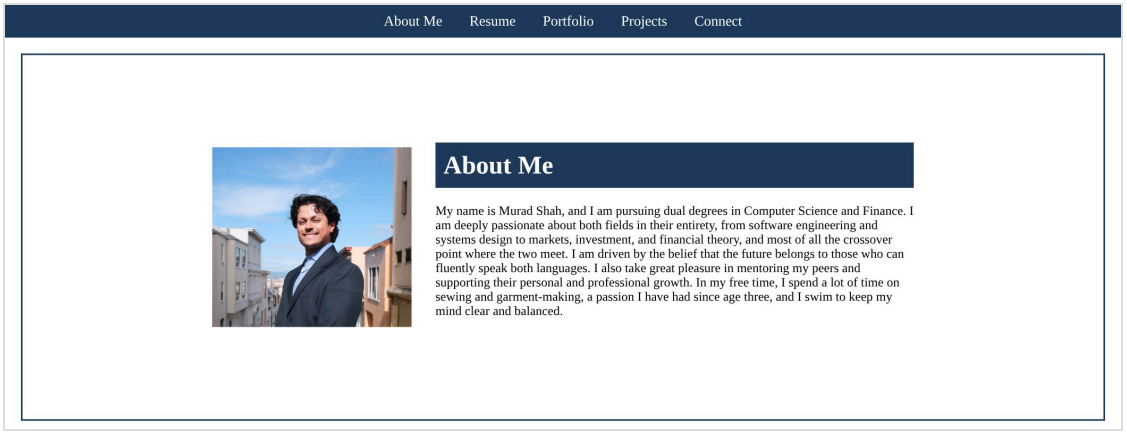

WHAT I DID

- Used inheritance so SavingsAccount and CheckingAccount share one BankAccount base class
- Tracked transactions and account details, saved to files so data persists
- Stored accounts in a dynamic data structure and kept a live count of open accounts
- Generated a unique account number for every new account
- Built a simple menu to walk users through each banking task

WHAT I LEARNED

- Turning real banking concepts into clean, maintainable code

C++ / OBJECT-ORIENTED PROGRAMMING / FILE I/O

PERSONAL WEBSITE

muradshah.com, built from scratch to share my background, resume, portfolio and projects.

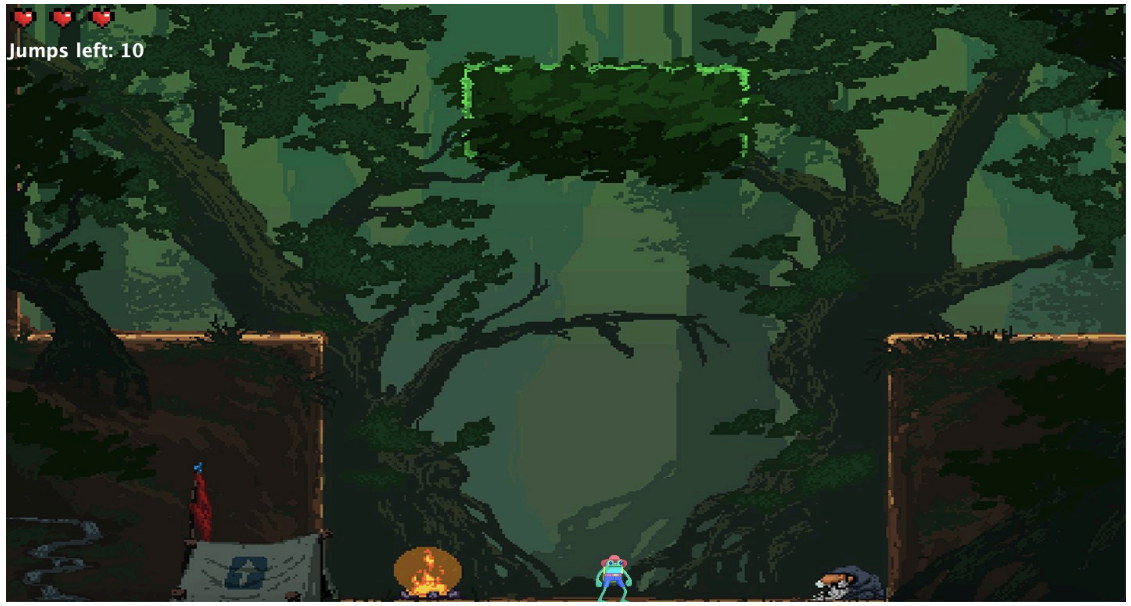

WHAT I DID

- About Me, Resume, Portfolio, Projects and Connect sections, plus a working contact form
- Smooth-scrolling navigation and a layout that adapts to phones
- First hosted the site on AWS S3
- Moved it to GitHub Pages with my own domain, DNS set up through IONOS, and HTTPS

WHAT I LEARNED

- Owning a site end to end: design, code, hosting and domain setup

HTML / CSS / JAVASCRIPT / GITHUB PAGES

JUMP-IT

A 2D platformer my team built for an application development course, with platforms, traps and full player movement.

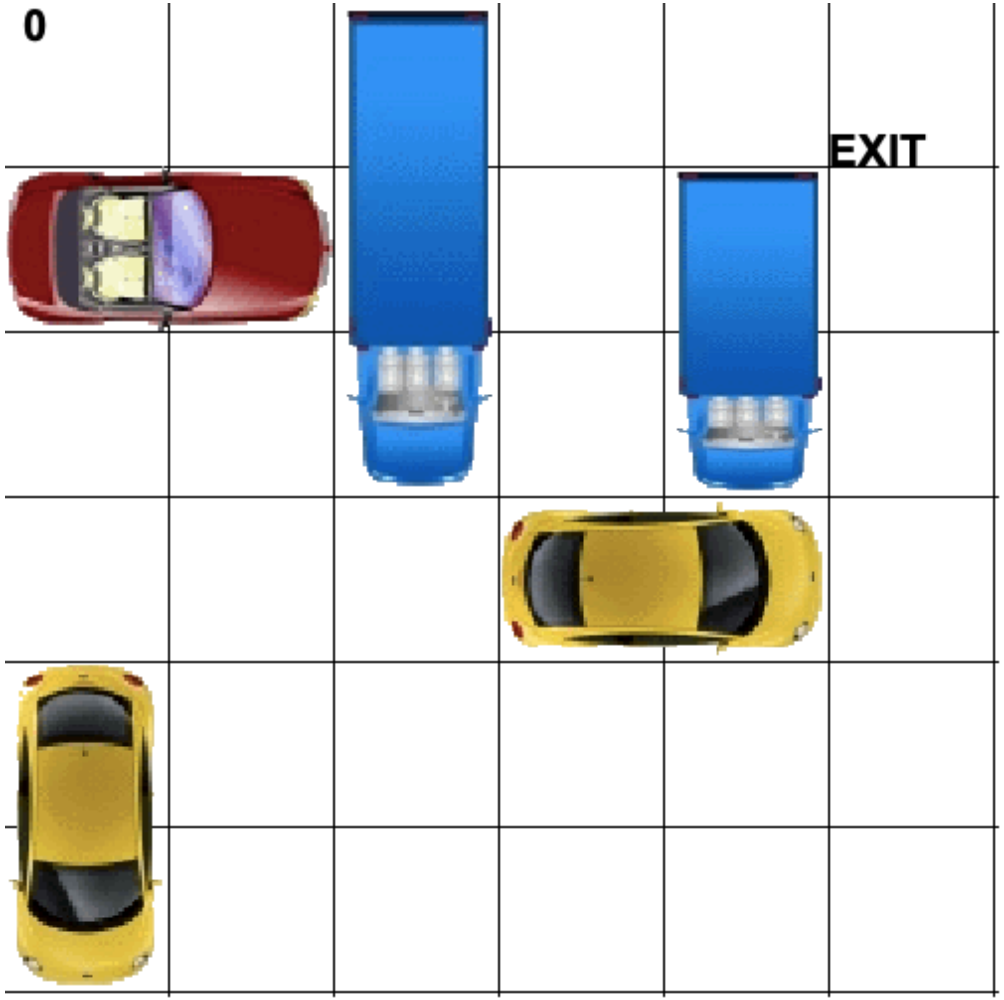

WHAT I DID

- Built a grid system with a 2D array to place platforms and traps dynamically
- Wrote collision detection between the player, platforms and traps
- Created PushSpring and WindTrap classes under a shared Trap class
- Programmed the physics: gravity, jumping and horizontal movement
- Split the code into modular classes (Player, Grid, Jumpmap) so it could scale

WHAT I LEARNED

- Stronger Java and object-oriented design, plus testing and debugging in a team

JAVA / OOP / GAME PHYSICS / TEAM PROJECT

PARKING LOT PUZZLE

A sliding vehicle puzzle in Java: shuffle the cars and trucks until your car can reach the exit.

WHAT I DID

- Vehicle movement, collision detection and a win condition when your car exits
- Drag and drop controls using mouse event handlers
- Snapping so vehicles stay lined up with their row or column while moving
- A simple interface that makes the puzzle quick to pick up

WHAT I LEARNED

- Event-driven design and building user interfaces in Java
- Patience with debugging and polishing the small details

JAVA / ACM GRAPHICS / EVENT-DRIVEN DESIGN
